

## 2.9: STRING OPERATIONS

Contributed by [Chuck Severance](#)  
Clinical Associate Professor (School of Information) at [University of Michigan](#)

The `+` operator works with strings, but it is not addition in the mathematical sense. Instead it performs *concatenation*, which means joining the strings by linking them end to end. For example:

### CODE 2.9.1 (PYTHON):

```
first = 10
second = 15
print(first+second)

first = '100'
second = '150'
print(first + second)
```

runrestart

The output of this program is `100150` .
